ALL OUR PRODUCTS CONTAIN PINE SEEDS  
**THE TREES** most commonly used  
 in our climate zone for the production  
**of PAPER AND WOODEN** articles

- 1** one adult pine "produces" oxygen necessary for the lives of three people
- 1** one tree produces as much oxygen a year as a person consumes in **2 years of life**
- 1** one hectare of forest absorbs as much CO<sub>2</sub> as 1 hour as 200 people release it

# GROWNOTEBOOK

**ECO-FRIENDLY** inside blocks can be made of:

## FSC-CERTIFIED PAPER

It's a product of responsible forest management, and it means that the trees, from which it was created, were obtained from legal sources, without violating human rights and nature. FSC is the only certification system supported by major ecological non-governmental organizations like WWF and Greenpeace.

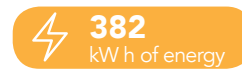

The bleaching process used to whiten paper carried out without the use of chlorine gas. It is uncoated, opaque and has excellent parameters for printing.

## RECYCLED PAPER

Is made out of 100% waste paper scrap from FSC certified paper. It is uncoated, opaque, has a matt surface and smooth texture characterized by high quality for printing.

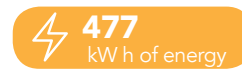

Recycling 1 ton of paper saves:

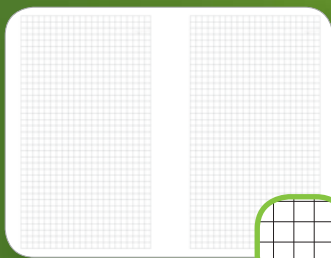

## STONE PAPER

A type of paper that is made out of calcium carbonate 80% (limestone) and bio-polyethylene resin 20% (HDPE). This high flexible and water resistant paper needs 1/3 less ink than classic paper, while maintaining the intensity of the colors.

Recycling 1 ton of paper saves:

## WHY BLACK PINE TREE?

Black pine tree is the most common paper and furniture material in our region.

## PINE TREE SEEDLING - DPN

(Pinus Nigra) in paperpot container

### YOU SHOULD KNOW:

- black pine is a **fast-growing** tree, reaches up to **40 m** in height
- It is a basic source of wooden furniture and paper pulp
- resistant to salinity and pollution, therefore it is suitable for planting in cities and roads sides
- pile root system is perfect for strengthening dunes and slopes
- shapes well and tolerates pruning

## HOW PAPER IS MADE ?

### 1 TREE = 50 KG of PAPER

- 1 first you need to prepare paper pulp, i.e. crush the raw material, generally wood
- 2 paper pulp is mixed with water, glue, inks and other additives, then fulling
- 3 combine the wet fibers and compress into webs or sheets
- 4 after drying and cooling, the paper is ready for use
